

COMMUNITY TECH ROUNDTABLE

SDFF wants your opinions and testimonials about your experiences with technology and how our classes have helped shape your ideas.

OBJECTIVES

The purpose of this project is to receive feedback and testimonials with community members and explore participant's:

- **experiences with technology,**
- **engagement in tech classes offered by SDFF,** and
- **perspectives on the future of technology.**

This project aims to not only gather valuable insights but also foster a sense of community, empowerment, and collaboration among our members.

FACILITATION

Participants will be split into groups of about 5-6 people. Facilitators (SDFF Staff) will then lead discussion by asking questions pertaining to the objectives. We encourage folks who attend our class as well as community members and librarians/staff to participate. Each participant will also be given a survey at the end of the class to complete.

NOTE Some participants may be recorded for internal reporting and marketing use. You may opt out of being recorded.

BENEFITS

Gather Valuable Insights

Collect feedback and testimonials from community members about their technology usage and learning experiences.

Enhance Engagement

Promote active participation, conversation, and collaboration among community members.

Improve Programs

Utilize feedback to enhance and tailor our tech classes to better meet the needs and interests of the community.

Empower the Community

Inspire confidence and awareness about technology while showcasing the community's unique perspectives.

ROUNDTABLE SITES
