

Researching your Family Roots

Genealogy Research

Genealogy and DNA Technology:

How it can assist you when researching your ancestry

Thursday, January 18 • 10:00 - 11:00 a.m.

Ground Floor, Neil Morgan Auditorium

- The discussion covers how DNA technology works, available tests, and major websites with DNA databases.
- DNA technology is increasingly vital for tracing family ancestry.
- Various tools help interpret DNA results and organize matches along family lines.
- AncestryDNA, with the largest database, offers tools like Throughlines, which searches family trees for shared ancestors.

Presenter: Colin Whitney, former Education Director for the San Diego Genealogical Society and current leader of the California Pioneer Certificate Program, brings a wealth of experience to this lecture. Join Colin for an informative and compelling session as he shares his expertise on DNA research and insights from his genealogical journeys.
